TITLE : WAP SERVER ADDRESS
DESIGNATING METHOD FOR RADIO
COMMUNICATION TERMINAL

ABSTRACT : PROBLEM TO BE SOLVED: To realize a WAP server address designating method for a radio communication terminal.

SOLUTION: This method for designating the address of a WAP server in a radio data communication system, containing a WAP server converting different kinds of data and protocols between a radio communication system and an internet server, includes a process (34), in which it decides whether or not the registration position of a radio communication terminal is changed after confirming whether or not the radio communication terminal is normal (32), when the radio communication terminal requests registration (30) and a process in which it transmits registration request response information and the address information of a WAP server corresponding to it (36), when the registration position of the radio communication terminal is not changed as a result of the decision and transmits the position updating response information of the terminal and the WAP server address corresponding to it (38), when the registration position of the radio communication terminal and automatically updates the address of the WAP server, which corresponds to the movement of the radio communication terminal.
